Giants of early spectral classes which form the spiral
 branch of the Galaxy in the vicinity of the Sun move
 along the spiral in the direction of its unwinding at a
 rate of about 6 or 7 km/sec. Discrete clouds of the
 spiral have peculiar local movements. An investiga-

 wards the conjunction of "Gould's Belt" and the Milky
 Way. A second component is a forward movement in
 the direction of the centre of the Local System; the
